*Ekonomika transporta* (The Economics of Transportation) 2d rev.  
ed. Moscow, Transzheldorizdat, 1957. 711 p. 30,000 copies  
printed.

Ed.: Krishtal', L.I.; Tech. ed.: Khitroĭ, P.A.

**PURPOSE:** This textbook is intended for students in engineering-  
economic branches of Railway Transportation Institutes, as well  
as for railway workers engaged in the independent study of railway  
economics.

**COVERAGE:** The economic aspects of railway transportation are dis-  
cussed in this textbook. It covers such subjects as technical-  
economic problems, the most efficient way to use available  
facilities, methods for planning and organizing various branches

Card 1/21

The Economics of Transportation

293

of transportation operations and production, wages, costs, finances, and business accountability (khozraschet). For detailed information see Table of Contents. The book is written by several specialists in the field of railway transportation: Chapters I and IV, and part 1 of chapter II are written by Prof. S.K. Danilov; Ch. II, (parts 2, 3, and 4) is written by D.I. Chernomordik, Doctor of Economic Sciences; Ch. III by Docent A.I. Korneyev; Chapters V, VII, and VIII by Prof. Ye. D. Khanukov, Doctor of Economic Sciences; Chapters VI and XIV by Docent K.N. Tverskoy, Candidate of Economic Sciences; Ch. IX by V.I. Dmitriev, Candidate of Economic Sciences; Ch. X by Prof. A. Ye. Gibshman, Doctor of Technical Sciences; Ch. XI by Docent V.E. Umbliy, Candidate of Economic Sciences (deceased), revised by Prof. S.K. Danilov; Ch. XII by Docent A.S. Chudov, Candidate of Technical Sciences; Ch. XIII by Docent N.S. Shil'nikov, Candidate of Economic Sciences. There are 24 pages of references (pp. 682 through 705). Pages 682 to the middle of 694 are devoted exclusively to references from the works of Marx, Engels, and Lenin.

Card 2/21

The Economics of Transportation

293

From the middle of p. 694 through p. 705, the references are transportation orders issued by the Communist Party and the Soviet government. No other personalities are mentioned.

TABLE OF  
CONTENTS:

Foreword	3
Ch. I. Subject and Scope of Courses in Transportation Economics	5
Ch. II. Railway Transportation in Capitalist Countries	
1. Social and economic aspects of transportation in capitalist countries	16
2. Role of transportation in capitalist production	20
Characteristics of transportation as a branch of industrial production	20
Characteristics of transportation as an industry	22
Characteristics of capitalist transportation	24
Card 3/21 costs	24

The Economics of Transportation

293

Role of transportation in the development of capitalism	27
3. Railway transportation during the imperialist period	30
Transportation; monopolies and financial aspects	30
Law of irregular development manifested in transportation	35
Inconsistencies in the development of capitalist transportation	39
Intensification of the exploitation of railway workers and their struggle against capitalist oppression	46
Transportation as a tool of imperialistic policies and colonial exploitation	48
Influence of militarized economies and armament races on capitalist transportation	50
4. Characteristics of railway transportation in various capitalist countries and colonies	54

Card 4/21

The Economics of Transportation

293

Ch. III. Transportation in Pre-revolutionary Russia

1. Transportation in Russia before the reforms of 1861 60
2. Transportation in Russia during the capitalist period 63
3. Transportation in Russia during the imperialist period 69
4. Transportation in Russia during World War I 80

Ch. IV. Socialist Transportation and Main Stages of its Development

1. Social and economic aspects of transportation in the USSR and its role in developing the national economy 84
2. Stages in the development of socialist transportation 93
  - Railway transportation in the USSR during the period from the victory of Soviet power (1917) to the beginning of the Great Patriotic War (World War II) 93
  - Railway transportation during the Great Patriotic War (World War II) 109
  - Railway transportation during the post-war period 114

Card 5/21

The Economics of Transportation

293

Ch. V. Technical and Economic Characteristics of the Soviet Transportation System

- |  |     |
|--|-----|
| 1. Unification of the Soviet transportation system                     | 124 |
| 2. Technical and economic characteristics of Railway transportation    | 126 |
| 3. Technical and economic characteristics of water transportation      | 130 |
| 4. Technical and economic characteristics of automotive transportation | 138 |
| 5. Technical and economic characteristics of air transportation        | 145 |
| 6. Technical and economic characteristics of oil pipelines             | 148 |

Ch. VI. Basic Principles and Organization of Railway Transportation Planning

- |   |     |
|---|-----|
| 1. Law of systematic and regular development of the national economy, as manifested in transportation | 151 |
|---|-----|

Card 6/21

The Economics of Transportation	293
2. Scope of Railway transportation planning, as related to over-all national economic planning	158
Railway transportation planning, a part of the over-all national economic plan	158
Types of transportation plans: long-range, current, and operational	160
Sections of the Railway transportation plan	162
Scope of the production-financial plan for various departments of railway transportation	171
3. Organization and principles governing the planning of transportation development	174
Railway transportation administration	174
Railway transportation planning organizations, as related to the over-all planning system in the USSR	181
Yearly plans for Railway transportation, development stages	183

Card 7/21

The Economics of Transportation

293

Ch. VII. Freight Transportation and its Planning

1. Basic factors determining the volume of freight shipments	187
2. Changes in the volume of freight shipments	190
3. Freight-transportation distances	194
4. Distribution of Freight Shipments	200
5. The principal routes used in the transportation of heavy freight over the Soviet railroad network	202
6. Freight transportation over main traffic lines	211
7. Fluctuating loads of freight, loaded and unloaded cars	215
8. Fluctuating loads of freight, seasonal	217
9. Objectives and types of transportation plans	220
10. Freight transportation, objectives and premises of one-year and five-year plans	222
11. Freight transportation, stages in the preparation of one-year and five-year plans	225
12. Need-and-supply balance in the preparation of transportation plans	230

Card 8/21

The Economics of Transportation	293
13. Determining the rate of loading, unloading, import, and export	232
14. Methods for connecting consumer and supply centers	236
15. Calculating the volume of transit freight	247
16. Preparing schedules for normal freight loads on all Railway lines	253
17. Operational plans for freight-transportation	257
Ch. VIII. Passenger Service and its Planning	
1. Importance of passenger service	262
2. Changes in the volume of passenger traffic	263
3. Passenger service, uneven loads	267
4. Distribution of passenger service, by transportation line	270
5. Planning passenger service	272
Ch. IX. Planning the Use of Rolling Stock	
1. Characteristics of the use of rolling stock	279
2. Indexes of the use of rolling-stock and the economic importance of improvements	283
Card 9/21	

The Economics of Transportation

293

3. Steady improvement in the use of rolling stock	300
4. Economic importance of operational factors	304
5. Planning the use of rolling stock	314
Objectives of rolling-stock planning	314
Computation of car loads and mileage (loaded)	318
Planning the routing of empty cars to loading points	321
Computing mileage and load capacities for trains and locomotives	325
Determining the number of railway cars needed in a car park	328
Determining the number of locomotive needed in a locomotive park	332
Calculating rolling-stock mileage for passenger and freight service	336

Ch. X. Reconstruction of the Material-technical Base and Planning of Capital Investment for Railway Transportation

Card 10/21

The Economics of Transportation

293

- |   |     |
|---|-----|
| 1. Creation of the material-production base of Communism and development of transportation            | 339 |
| 2. Economic advantages of Diesel and electric locomotives   | 347 |
| Procedure for determining the effectiveness of electric locomotives                                   | 358 |
| 3. Prospects for the development of electric and Diesel locomotives                                   | 367 |
| 4. Locomotives on railways of the U.S.S.R.  | 374 |
| 5. Economic advantages of modernized railway cars   | 379 |
| 6. Economic advantages of improved railway tracks and roadbeds  | 389 |
| 7. Economic advantages of modernized freight and passenger services                                   | 397 |
| 8. Economic advantages of modernized communications, signal and switch systems, and of centralization | 402 |
| 9. Economic benefits from the construction of new railways  | 409 |

Card 11/21

The Economics of Transportation

293

Importance of the main rail lines constructed by the Soviet regime	410
10. Planning capital investments in railway transportation	423
Premises to be taken into consideration when planning capital investments	423
Details to be considered when planning capital investments	427
Planning capital-investment	432
Plans for acquiring new rolling stock, tank cars and spare parts, and modernizing available rolling stock	434

Ch. XI. Planning and Organizing Railway Transportation Labor

1. Basic principles of socialists labor organization and the application of these principles in railway transportation	436
--	-----

Card 12/21

The Economics of Transportation

293

2. Productivity of labor in railway transportation	439
3. Economic effectiveness of new methods used by transportation labor	450
4. Establishing norms for transportation labor	462
5. Railway-transportation personnel	469
6. Working hours for railway transportation personnel	474
7. Wages for railway transportation personnel	477
Wages for locomotive engineers	485
Wages for locomotive-maintenance personnel working at depots	488
Wages for train conductors and maintenance men	488
Wages for labor engaged in switching operations	490
Wages for labor engaged in the maintenance of tracks	491
Bonuses	492
8. Planning of Railway Transportation Labor	495
General characteristics of the labor plan	495
Calculating the number of engineers needed and their total wages	497

Card 13/21

The Economics of Transportation

293

Calculating the number of locomotive-maintenance personnel needed to work at depots and their total wages	500
Calculating the number of workers need for technical inspection and maintenance of railway cars and their total wages	502
Calculating the number of technical and switching personnel needed for a station and their total wages	503
Calculating the number of workers needed for the maintenance of tracks and their total wages	504

Ch. XII. Railway Transportation Costs and Planning

Operational Expenses

1. Importance of railway transportation costs and ways to reduce them	508
2. Planning operational expenses	512
Classification of expenses	512
How to plan expenses (System for planning expenses)	516
How to plan expenses for fuel and electric power	519

Card 14/21

The Economics of Transportation

293

How to plan materiel and other expenses	523
How to plan expenses for the periodic and yearly overhaul of rolling stock	526
How to compute amortization losses	527
3. How to compute transportation costs for 1 ton-kilometer of freight, 1 passenger kilometer, and 1 ton-kilometer of both passengers and freight	531
4. How to compute transportation costs for various types of freight for passenger service on various types of railway cars and trains	538
5. Relationship between shipping volume and shipping costs	541
6. How to compute operational costs for various expense items	546
7. How to compute expense rates	548
8. How to compute expenses for moving and parked rolling stock	561
9. How to compute operational costs for locomotive sheds, car barns, stations etc.	566

Card 15<sup>21</sup>

The Economics of Transportation

293

How to compute operational costs for a basic locomotive shed	566
How to compute operational costs for marshalling yards, freight stations, and district stations	584
How to compute the cost of operating railway cars and car barns	586
How to compute operational costs for various railway departments	587

10. The transportation cost plan and how to analyze it	592
--	-----

Ch. XIII. Tariffs and Tariff Policies

1. Tariffs, a planned transportation cost	600
2. Development of the tariff system in railroad transportation	602
3. The post-war tariff system in railroad transportation	609
4. Types of tariff; tariff handbooks and the application of tariffs	617
5. Passenger tariffs	623

Card 16/21

The Economics of Transportation

293

Ch. XIV. <del>Finances and Business Accountability</del> (Khozaschet) in Railway Transportation	626
1. Objectives of financial computations	
2. Development of the Soviet system of financing and managing railway transportation	629
3. Railway revenues	639
Transportation revenues	639
Local revenues	642
4. Basic and circulating funds in railway transportation	643
Basic funds	643
Circulating funds	647
5. Balance sheet of revenues and expenses	654
6. Organization of business accountability in railway transportation	659
Organization of business accountability for railway lines	660
7. Organization of business accountability for railway units	664
Organization of business accountability for railway departments	667
Organization of business accountability for railway stations	670
Card 17/21	

The Economics of Transportation

293

Organization of business accountability for locomotive sheds	672
Organization of business accountability in the management of railway cars and car barns	676
Organization of business accountability for railway line maintenance	677
Organization of business accountability for railway communication and signaling systems	679

PROCESSING AND PROPERTIES INDEX

The influence of different methods of drying and storage of cultures on the properties of lactic acid streptococci. M. R. Hishman, L. A. Bannikova and E. Der'abina. *Molochanov Prom.* 7, No. 8, 5-9 (1940); *Chem. Zentr.* 1941, II, 1158-9; cf. C. A. 34, 4834; 36, 6683. — The properties of lactic acid streptococci are altered during the drying of cultures. With *Str. paracitrovorus* 116, the formation of volatile oils was reduced from 24.2 (distn. no.) to 12.5-16.6; with *Str. paracitrovorus* 18 the same value was reduced from 20.2 to 9.0. All cultures were more active as regards acid formation after drying than before; the same was true regarding the formation of acetoin, alc., ether and CO<sub>2</sub>. Strains isolated from the culture *Str. cremoris* UW 3/24 acquired the ability to ferment sucrose, maltose and dextrin after drying; the ability to ferment sucrose, however, was lost after 2 months' storage at  $-10^{\circ}$ . The properties of the cultures (as the ability to ferment carbohydrates, etc.) could also be altered by the addn. of CaCl<sub>2</sub> or rennet to the milk. The best method of drying (from the standpoint of the no. of cells remaining alive) was drying for 60-90 min. at  $40^{\circ}$  in a vacuum drying oven. M. G. Moore

Title : Disinfection of Premises by Ultra-Violet Rays.

Orig Pub : Moloch. Prom-st, 1956, No 5, 32-33

Abstract : The effectiveness of irradiation by UV lamps BUUV-30-P of premises of 52.6 m<sup>3</sup> to be used for fermentation purposes was studied in the Uglitch cheese-manufacturing plant. It was established that under the influence of UV rays, the phage of lactic acid streptococci is promptly destroyed in the air, while the bacteria and mouldy fungi are 75-80% destroyed after a 6-hour irradiation. On the surface of walls and equipment, the phages of lactic acid streptococci and Bacterium coli aerogenes perish after 6 hours of irradiation on such portions where the UV rays fall, and remain safe in spots remote from lamps and in shaded parts. The irradiation

than at those that produce large ones, where the conditions are less favorable for the propagation of mesophylic streptococci and their phages. Thorough daily disinfection reduces substantially the degree of contamination of the factories with phages. Least infected with phages of lactic acid streptococci are the MTF. The phages are rarely encountered in soil of collective farms and have not been found on green meadow plants.
